Exercises for Fundamentals of Information Theory

Fundamentals of Information Theory A signal is a way of conveying information from one point to another. Our concern is to examine how much information is conveyed by a particular signal. Signals are simple in form if they do not carry much information. A mathematically correct sinusoidal varying voltage is described by the equation $v = A \sin \omega t$ By definition this extends from $t = -\infty$ to $t = \infty$

Information theory studies the quantification, storage, and communication of information. It was originally proposed by Claude E. Shannon in 1948 to find fundamental limits on signal processing and communication operations such as data compression, in a landmark paper entitled "A Mathematical Theory of Communication".

INTRODUCTION TO INFORMATION THEORY {ch:intro_info} This chapter introduces some of the basic concepts of information theory, as well as the definitions and notations of probabilities that will be used

throughout the book. The notion of entropy, which is fundamental to the whole topic of this book, is introduced here. We also present the main questions of information theory, data compression ...
